E:\darshan college\Java 2019-20\solution\javaprograms>javac VegetableDemo.java

E:\darshan college\Java 2019-20\solution\javaprograms>java VegetableDemo
Potato : Cream
Brinjal : Purple
Tomato : Red

```

Assignment 2: Create interface `EventListener` with `performEvent()` method. Create `MouseListener` interface which inherits `EventListener` along with `mouseClicked()`, `mousePressed()`, `mouseReleased()`, `mouseMoved()`, `mouseDragged()` methods. Also create `KeyListener` interface which inherits `EventListener` along with `keyPressed()`, `keyReleased()` methods. WAP to create `EventDemo` class which implements `MouseListener` and `KeyListener` and demonstrate all the methods of the interfaces.

Assignment 2: Code

```

1 interface EventListener{
2     //performEvent Method
3     void performEvent();
4 }
5 interface MouseListener extends EventListener{
6     //mouseClicked Method
7     void mouseClicked();
8     //mousePressed Method
9     void mousePressed();
10    //mouseReleased Method
11    void mouseReleased();
12    //mouseMoved Method
13    void mouseMoved();
14    //mouseDragged Method
15    void mouseDragged();
16 }
17
18 interface KeyListener extends EventListener{
19     //keyPressed Method
20     void keyPressed();
21     //keyReleased Method
22     void keyReleased();
23 }
24
25 //Main Class

```

```

26 class EventDemo implements MouseListener, KeyListener{
27     //performEvent Method
28     public void performEvent(){
29         System.out.println("Perform Event Method");
30     }
31     //mouseClicked Method
32     public void mouseClicked(){
33         System.out.println("Mouse Clicked");
34     }
35     //mousePressed Method
36     public void mousePressed(){
37         System.out.println("Mouse Pressed");
38     }
39     //mouseReleased Method
40     public void mouseReleased(){
41         System.out.println("Mouse Released");
42     }
43     //mouseMoved Method
44     public void mouseMoved(){
45         System.out.println("Mouse Moved");
46     }
47     //mouseDragged Method
48     public void mouseDragged(){
49         System.out.println("Mouse Dragged");
50     }
51     //keyPressed Method
52     public void keyPressed(){
53         System.out.println("Key Pressed");
54     }
55     //keyReleased Method
56     public void keyReleased(){
57         System.out.println("Key Released");
58     }
59
60     //Main Method
61     public static void main(String[] args) {
62         EventDemo e = new EventDemo();
63         e.performEvent();
64         e.mouseClicked();
65         e.mousePressed();
66         e.mouseReleased();
67         e.mouseMoved();
68         e.mouseDragged();
69         e.keyPressed();
70         e.keyReleased();
71     }
72 }

```

Assignment 2: Output

```

Perform Event Method
Mouse Clicked
Mouse Pressed
Mouse Released
Mouse Moved
Mouse Dragged
Key Pressed
Key Released
```

Assignment 3. The Transport interface declares a deliver () method. The abstract class Animal is the super class of the Tiger, Camel, Deer and Donkey classes. The Transport interface is implemented by the Camel and Donkey classes. Write a test program that initialize an array of four Animal objects. If the object implements the Transport interface, the deliver () method is invoked.

Assignment 3: Code

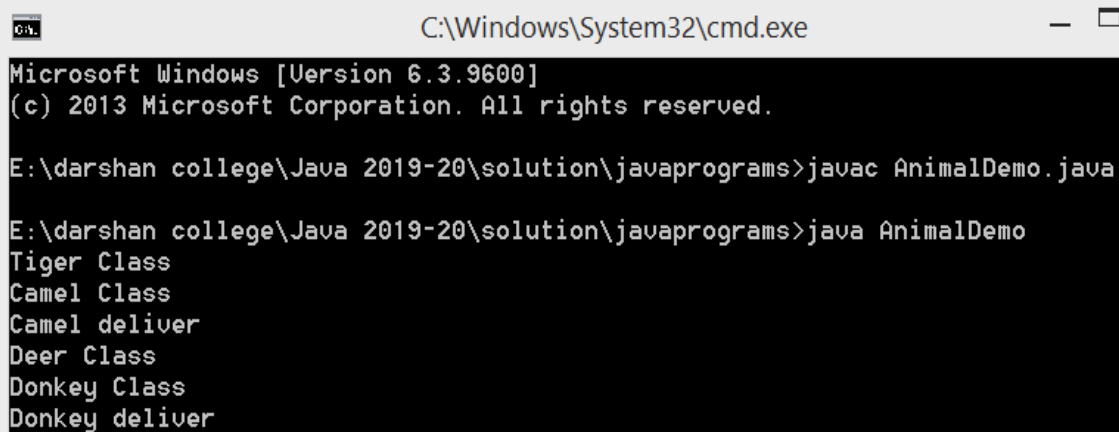

```
1  interface Transport{
2      void deliver();
3  }
4  abstract class Animal{
5      abstract void display();
6  }
7
8  //Tiger Class
9  class Tiger extends Animal{
10     void display(){
11         System.out.println("Tiger Class");
12     }
13 }
14
15 //Camel Class
16 class Camel extends Animal implements Transport{
17     void display(){
18         System.out.println("Camel Class");
19     }
20     public void deliver(){
21         System.out.println("Camel deliver");
22     }
23 }
24
25 //Deer Class
26 class Deer extends Animal{
27     void display(){
28         System.out.println("Deer Class");
```

```

29     }
30 }
31
32 //Donkey Class
33 class Donkey extends Animal implements Transport{
34     void display(){
35         System.out.println("Donkey Class");
36     }
37     public void deliver(){
38         System.out.println("Donkey deliver");
39     }
40 }
41
42 //Main Class
43 class AnimalDemo{
44     public static void main(String[] args) {
45         Tiger t = new Tiger();
46         t.display();
47
48         Camel c = new Camel();
49         c.display();
50         c.deliver();
51
52         Deer d= new Deer();
53         d.display();
54
55         Donkey don= new Donkey();
56         don.display();
57         don.deliver();
58     }
59 }

```

Assignment 3: Output

```
